ALMOG FRANCO

QA AUTOMATION ENGINEER

Gannei Tikva, Israel • 054-7332609 • almog246@gmail.com • linkedin.com/in/almog-franco-154573177

PROFESSIONAL SUMMARY

QA Automation Engineer with 4+ years of experience architecting end-to-end UI and API automation frameworks in Python and JavaScript. Specialized in Playwright, PyTest, CI/CD integration, and flaky-test stabilization. Leverages modern AI engineering (agents, LLM CLI tooling) to automate root-cause triage and streamline testing lifecycles.

TECHNICAL SKILLS

Languages & Automation:	Python, JavaScript, Java, Playwright, PyTest, Selenium WebDriver, Page Object Model (POM)
Testing Specialties:	API Automation, End-to-End (E2E) Testing, UI Testing, Test Strategy, Flaky Test Stabilization, Root-Cause Analysis
CI/CD, Cloud & Tools:	GitHub Actions, Jenkins, GitLab CI, Docker, AWS, SQL, MongoDB, Jira, Xray, Git, n8n
AI-Assisted Engineering:	Claude Code (via AWS Bedrock), Codex (OpenAI CLI), Gemini CLI, GitHub Copilot

WORK EXPERIENCE

QA Automation Engineer – Droxi
2026 – Present

- Design and maintain end-to-end test automation for a clinical/EHR web platform using Playwright and Python, covering critical workflows: clinical document handling, lab orders, and patient-request pipelines integrated with Athena Health.
- Developed an AI triage agent that automatically investigates failing test runs, isolates root causes, and opens pull requests with automated test fixes, drastically cutting triage overhead.
- Applied blast-radius analysis before changing shared fixtures and page objects to avoid unintended breakage across dependent tests.
- Architected maintainable test suites using the Page Object Model, separating locators and widget state from generic helpers so tests stay readable and reusable across the team.
- Integrated automated testing with Jira and Xray, authoring test cases and linking them to tickets for traceability; raised team code quality by codifying recurring PR-review patterns into a reusable review checklist.

Automation Engineer – Nutrino Health
2024 – 2026

- Architected and maintained comprehensive backend REST API automation test suites using Python and PyTest, validating complex data payloads, response schemas, and system business logic.
- Optimized test framework execution time and suite reliability through PyTest fixture optimization, modular setup/teardown hooks, and proactive flaky test refactoring.
- Defined API test strategies and structured comprehensive test plans for newly deployed microservices and backend endpoints.
- Conducted in-depth root-cause analysis on API automation failures, collaborating directly with R&D to patch backend defects and verify production releases.

Student QA Automation Engineer – Proofpoint
2022 – 2024

- Formulated and executed System Test Plans (STP), automating 40+ critical sanity and regression test flows using Python and PyTest.
- Contributed Python code to extend internal automation infrastructure, enhancing test execution reliability.
- Analyzed automated test execution cycles to identify regressions and bridge gaps in automation coverage.
- Collaborated with developers to debug functional issues and validate software defect resolutions.

QA Engineer – Namogoo
2021 – 2022

- Executed functional, exploratory, and regression testing on client-facing web solutions, validating DOM extraction logic and JavaScript behaviors across diverse browser environments.
- Conducted root-cause analysis on client-reported defects using Chrome DevTools and network inspection, partnering closely with R&D to isolate bugs and verify patches.
- Tested and validated JavaScript-based webhooks to ensure accurate attribute extraction and minimal impact on host site performance.
- Authored comprehensive defect reports with step-by-step reproduction flows, logs, and payload traces to streamline developer turnaround.

EDUCATION

B.Sc. Computer Science
HIT (Holon Inst. of Technology) 2020 – 2024

CERTIFICATIONS

AWS Academy Graduate
Introduction to Cloud 2022
